

## Master Formula's Amazing New Matte Finish Care System As easy as 1-2-3

**1** First use Master Formula Quick Spot Remover to dissolve any tar, bugs, tough grease stains or heavy soil. Simply spray Quick Spot Remover onto the spot, gently massage it with a wet microfiber towel or soft sponge then wipe it off with a damp cloth. Use it alone for emergency spot removing or as a pre-wash spot remover.

**2** Next, wash using Master Formula's Matte Gentle Wash. Rinse first with water from top to bottom to loosen dirt. Add about four (4) cap fulls of Matte Gentle Wash to a gallon of water and gently soap the surface with a soft sponge or a sponge washing mitt. Soap by sections then rinse that section before moving on. Finally, rinse from top to bottom. While it dries, gently wipe any drips with a damp microfiber towel. It leaves a streak free smooth beautiful matte look.

**3** Lastly, spray on Master Formula Matte Elegance Protector for a microscopic protective barrier. This will protect your Matte Finish against oxidizing and leave a beautiful smooth matte sheen without streaks or unevenness. While it's drying simply wipe any drips with a dampened microfiber towel. That's it. You're done, and it's beautiful.

- \* These three steps are fun and easy and the science in the formulas will preserve your matte finish for many years to come. They are also perfectly safe for other surfaces near your matte finish such as high gloss painted surfaces, chrome, aluminum, glass etc.
