

MASTER FORMULA Metal Gloss polishes aluminum and stainless steel to look like chrome. It makes chrome look like glass, brass look like gold, and polishes gold and silver to an amazing high gloss. **Metal Gloss** is formulated with exclusive technology found in no other polish in the world. We created it with European jeweler's rouges originally designed to polish the most expensive precious metals you may have, including platinum.

Our challenge was to create a formula powerful enough for stainless steel and aluminum, yet smooth enough to leave even the finest chrome or precious jewelry without a mark or scratch. In achieving this, we have created the ultimate metal polish, **Metal Gloss**.

This new technology includes ingredients for specialty metals like BILLET aluminum. Our customers are enjoying amazing results with new cars, classic cars, "show bikes," off-road buggies, and big rigs.

Metal Gloss was also designed for the "easy application" demands of our new generation. For years, metal polishing has been a difficult chore. Some polishes were abrasive and scratchy. Others were too weak to remove oxidation. Most were messy and hard to wipe off. We had conversations with thousands of polishers. Some were professionals, others were everyday people polishing wheels on their cars or brass and silver pieces in their homes. They all said the same thing. "We want something easy to use, easy to wipe off, that leaves the surface with flawless reflections."

Master Formula Metal Gloss does all that and more. We test marketed at classic car shows, international auto shows, international motorcycle shows, NHRA races, and more. The response all over the United States was overwhelming. Today there are thousands of customers who loudly testify that **Master Formula Metal Gloss** is by far the finest metal polish they ever used on aluminum, chrome, brass, stainless steel, copper, gold, silver or platinum.

So if you haven't already had the pleasure, we invite you to try it and join our growing family of enthusiasts.
